

Spaghetti and Marshmallow Challenge.

The challenge was to build the strongest and tallest structure.

Why?

As well as developing social skills and as a team-building activity it also had links with science plus it was also lots of fun.

Each team was given 15 minutes to build their structures, we then showed some examples from the science museum and let each group have an extra 10 minutes. The teams with the strongest/tallest won class dojos as well as the teams that worked well together.

As you can see the children worked well and got incredibly sticky!
